

## First Priority CRR/GRA Targets for Poland Requirements

I Statement of Priority and Background

The collection of topographic maps of Poland published according to Soviet specifications published in 1953 or later is one of the highest priority intelligence requirements. Emphasis should be placed on the 1:25,000 series published in six or more colors. The two-color edition, also of post-World War II date, is not compiled according to Soviet specifications.

Post-World War II Polish and Soviet catalogs of triangulation points (first through fourth order); leveling, astronomic, gravimetric and magnetic data; and adjustment and conversion data for converting Polish datums, and grid to the Soviet system are allied requirements of the highest priority.

II Justification

These maps and data will provide: information which is necessary if U.S. missiles are to be delivered on target and which will help in developing estimates of Soviet Bloc missile capabilities; indicators of Soviet preparedness for initiating an attack; and intelligence for planning and executing military operations and for assessing economic developments.
